コース概要

This course provides instruction, hands-on practice, and interactive demonstrations to help you to learn how to plan, implement, operate, and troubleshoot the NetApp SnapProtect solution. Learn how to configure backup and recovery for NetApp storage system volumes, Microsoft SQL, SharePoint, and Exchange server content databases, Hyper-V and VMware virtual machines, and Oracle databases. Learn how to upgrade, restore, and troubleshoot the SnapProtect solution central control: the CommServe and DataFabric Manager servers.

目的

このコースを修了すると、次のことができるようになります。

- Install and configure a NetApp SnapProtect solution environment
- Set up SnapProtect disk libraries
- Set up SnapProtect disk-to-disk and disk-to-tape storage policies
- Protect NAS and SAN application data in physical and virtual environments
- Upgrade and restore the SnapProtect solution environment
- Use diagnostic tools to troubleshoot the SnapProtect solution

アウトライン

Module 1: The SnapProtect Solution: Getting Started

Module 2: Configuring Disk Libraries and Tape Media

Module 3: Storage Policies and Schedule Policies

Module 4: Protecting NAS Data

Module 5: Protecting Microsoft SQL Database Content

Module 6: Protecting Microsoft SharePoint Content Databases

Module 7: Protecting Microsoft Exchange Mailbox Data

Module 8: Protecting VMware and Hyper-V Virtual Machines

Module 9: Protecting Oracle Database Content

Module 10: Maintaining the SnapProtect Environment

Module 11: Tools and Techniques to Resolve Issues
